3) (5 pts) ALG (AVL Trees)

Suppose we randomly shuffle the six words in the list below and insert them into an AVL tree. (In other words, we insert them in random order – not necessarily the order given – with each of those words ending up in the AVL tree exactly once.)

Fill in the blank next to each word to indicate whether it could **ever** end up at the root of the resulting AVL tree ("yes") or not ("no"). (If you answer "no" for a given word, you are saying it could **never** end up at the root of the resulting AVL tree.)

You may assume the AVL tree is ordered alphabetically. So, all the words in the left subtree of "apple" would have to come before "apple" in alphabetical order, and all the words in its right subtree would have to come after "apple" in alphabetical order.

_____ apple

_____ mango

_____ papaya

_____ banana

_____ mulberry

_____ blueberry

^
Fill in each blank with "**yes**" or "**no**" to indicate whether the word could serve as the root of an AVL tree that results from shuffling these six words and inserting them into an AVL tree in random order.

Computer Science Foundation Exam

May 21, 2022

Section C

ALGORITHM ANALYSIS

NO books, notes, or calculators may be used,
and you must work entirely on your own.

Name: _____

UCFID: _____

Question #	Max Pts	Category	Score
1	10	ANL	
2	5	ANL	
3	10	ANL	
TOTAL	25		

You must do all 3 problems in this section of the exam.

Problems will be graded based on the completeness of the solution steps and <u>not</u> graded based on the answer alone. Credit cannot be given unless all work is shown and is readable. Be complete, yet concise, and above all <u>be neat</u>. For each coding question, assume that all of the necessary includes (stdlib.h, stdio.h, math.h, string.h) for that particular question have been made.
