

## 1) (10 pts) ANL (Algorithm Analysis)

With proof, determine the Big-Oh run time of the function,  $f$ , below, in terms of the input parameter  $n$ . (Note: You may use results from algorithms studied previously in COP 3502 without restating the full proof of run time.)

```
int f(int array[], int n) {
    return frec(array, 0, n-1);
}

int frec(int array[], int lo, int hi) {

    if (lo == hi) return array[lo];

    int left = frec(array, lo, (lo+hi)/2);
    int right = frec(array, (lo+hi)/2+1, hi);

    int i, lCnt = 0, rCnt = 0;
    for (i=lo; i<=hi; i++) {
        if (abs(array[i]-left) < abs(array[i]-right))
            lCnt++;
        else
            rCnt++;
    }
    if (lCnt > rCnt) return lCnt;
    return rCnt;
}
```

The function  $f$  is a wrapper function that calls the recursive function  $frec$ .  $f$  takes in an array of size  $n$  while  $frec$  takes in a subsection of an array of size  $hi-lo+1$ . Let  $T(n)$  be the run time of the function  $frec$  where  $hi-lo+1 = n$ .

To determine what  $T(n)$  equals, first note that two recursive calls are made, each to arrays of size  $n/2$ . Each of these recursive calls, by definition, takes  $T(n/2)$  time. This is followed by a for loop that runs  $n$  times, inside of which there are only a few  $O(1)$  operations. Thus, we add  $O(n)$  to the runtime of the function for the second portion of the code. Thus, our total tally is:

$$T(n) = T(n/2) + T(n/2) + O(n)$$

$$T(n) = 2T(n/2) + O(n)$$

If one recognizes this as the recurrence of Merge Sort solved in COP 3502, one can state that the result of solving this recurrence relation is  **$T(n) = O(n \lg n)$** . Alternatively, either the Master Theorem or Iteration Technique can be used to arrive at the final solution for the recurrence.

**Grading:** 2 pts for setting up any sort of recurrence relation, 2 pts for recognizing that there are two recursive calls, 2 pts for recognizing that the input size for the recursive calls is  $n/2$ , 2 pts for recognizing that there is  $O(n)$  extra work in the function and 2 pts for the final solution.
