

3) (10 pts) DSN (Stacks)

Consider a string mathematical expression can have two kind of parenthesis '(' and '{'. The parenthesis in an expression can be imbalanced, if they are not closed in the correct order, or if there are extra starting parenthesis or extra closing parenthesis. The following table shows some examples:

Expression	Status	Expression	Status
({) }	Imbalanced due to incorrect order of).	({ }))	Imbalanced due to extra)
(()	Imbalanced due to extra (({ })	Balanced
{ () }	Balanced		

Write a function that will take an expression in the parameter and returns 1, if the expression is balanced, otherwise returns 0. You have to use stack operations during this process. Assume the following stack definition and the functions already available to you. You may assume that the stack has enough storage to carry out the desired operations without checking.

```
void initialize(stack* s); // initializes an empty stack.
int push(stack* s, char value); //pushes the char value to the stack
int isEmpty(stack* s); // Returns 1 if the stack is empty, 0 otherwise.
char pop(stack* s); // pops and returns character at the top of the stack.
char peek(stack* s); // returns character at the top of the stack.
```

Note: pop and peek return 'T' if the stack s is empty.

// Pre-condition: e only contains the characters '(', ')', '{' and '}'.

```
int isBalanced(char *e) {
    struct stack s;
    initialize(&s);
    for(int i=0; e[i]!='\0'; i++) {
```

```
        }
        _____ ;
    }
```

Computer Science Foundation Exam

January 15, 2022

Section B

ADVANCED DATA STRUCTURES

**NO books, notes, or calculators may be used,
and you must work entirely on your own.**

Name: _____

UCFID: _____

NID: _____

Question #	Max Pts	Category	Score
1	10	DSN	
2	5	ALG	
3	10	DSN	
TOTAL	25		

You must do all 3 problems in this section of the exam.

Problems will be graded based on the completeness of the solution steps and not graded based on the answer alone. Credit cannot be given unless all work is shown and is readable. Be complete, yet concise, and above all be neat. For each coding question, assume that all of the necessary includes (stdlib, stdio, math, string) for that particular question have been made.
