3) (10 pts) DSN (Tries)

In many word games, the player is given some tiles with letters and must form a word with those tiles. Given a trie that stores a dictionary of valid words and a frequency array storing information of the tiles a player has, determine the number of unique words she can form with those tiles. Complete the function shown below to solve the given problem. Note: the entry in freq[i] represents the number of tiles with the letter 'a' + i. (Hint: recursing down the trie is exactly like placing a tile down, which means updating the freq array. When you have finished "trying a tile" you have to put it back into your pool, which means editing the freq array again.)

```
typedef struct TrieNode {
    struct TrieNode *children[26];
    int flag; // 1 if the string is in the trie, 0 otherwise
} TrieNode;
int countWords(TrieNode* root, int freq[]) {
    int res = root->flag ;
                                                                   // 1 pt
    int i;
    for (i=0; i<26; i++) {
         if (\underline{freq[i]} == 0 \mid | \underline{root->children[i]} == \underline{NULL}) // 4 pts
             continue;
         freq[i]-- ;
                                                                   // 1 pt
         res += countWords(root->children[i], freq) ;
                                                                   // 3 pts
         freq[i]++ ;
                                                                   // 1 pt
    }
    return res;
```

Computer Science Foundation Exam

Section II A

ALGORITHMS AND ANALYSIS TOOLS

SOLUTION

NO books, notes, or calculators may be used, and you must work entirely on your own.

| Question # | Max Pts | Category | Score |
|------------|---------|----------|-------|
| 1 | 10 | ANL | |
| 2 | 5 | ANL | |
| 3 | 10 | ANL | |
| TOTAL | 25 | | |

You must do all 3 problems in this section of the exam.

Problems will be graded based on the completeness of the solution steps and <u>not</u> graded based on the answer alone. Credit cannot be given unless all work is shown and is readable. Be complete, yet concise, and above all <u>be neat</u>. For each coding question, assume that all of the necessary includes (stdlib.h, stdio.h, math.h, string.h) for that particular question have been made.
